

FOR IMMEDIATE RELEASE

Edupoint's Synergy™ Student Information System Selected by Oregon as State-wide SIS Provider

Joint Procurement and Implementation Process Selects Edupoint's Innovative and Proven National Solution

Irvine, CA (February 27, 2012) – Edupoint™ Educational Systems, a leading student information system (SIS) solutions vendor to the national K-12 market, has been exclusively selected as the student information system solutions provider by the Oregon Student Information System Consortium (OSIS). OSIS, led by a steering committee consisting of members from Salem-Keizer School District, Multnomah Educational Service District (ESD), Northwest Regional ESD, Portland Public Schools and Eugene School District, worked in conjunction with subcommittee members from school districts and ESDs across the state, including the Oregon Department of Education. OSIS members began working together on selecting a common SIS that will meet the evolving needs of all Education Service Districts and school districts – large and small – throughout the state. After an extensive national search, the Synergy™ Student Information System from Edupoint was unanimously selected.

The Oregon Student Information System Consortium members represent almost 400,000 students across the state. The selection process of a common SIS was a collaborative effort, with participation from more than 350 support and school office staff, and over 950 instructional staff from districts and ESDs throughout Oregon. Evaluation teams worked throughout the summer and narrowed the field of eight SIS vendors down to three finalists. After extensive on-site technology demonstrations, the consortium felt the innovative and proven solutions of the Synergy Education Platform best suited their needs. The resulting price and contract agreement will be available to all consortium participants.

“The evaluation process focused on many aspects of an SIS that are important for school districts,” stated Kristen Duus, IT Director of Salem-Keizer School District. “Aside from cost, we reviewed the ability of the vendor to consider various implementation models, and for their student information system to meet the needs of districts and ESDs of all sizes. We were originally open to awarding the contact to multiple vendors if needed, but Edupoint and their integrated Synergy SIS, gradebook and special education solutions met the vast majority of our needs and provided the best fit overall. Committee members also thought Edupoint’s ability to support instruction and standards-based learning was far superior to the other solutions reviewed.”

The Synergy™ Education Platform is a powerful student data management platform designed by thought leaders in K-12 SIS technology. It consists of the Synergy Student Information System, a true-web SIS that delivers the industry’s richest feature-set and state reporting capabilities, and leverages the Synergy TeacherVUE™ Gradebook, an intuitive gradebook that helps teachers efficiently track results and individualize learning with traditional or standards-based gradebook models. Robust ParentVUE™ and StudentVUE™ web portals allow parents and students access to real-time information on assignments and grades, attendance, and discipline, and Synergy™ Special Education provides a collaborative environment with customized workflow that generates and stores student IEPs, streamlines the special education process, and ensures compliance to meet state and federal regulations. OSIS members have a future option to incorporate LessonVUE™, an integrated component of the Synergy Education Platform that provides curriculum management designed to support data-driven decision making by managing curriculum, assessment, and student performance.

“One of the benefits of a single student information system is that it makes gathering data for state reporting more efficient,” says Rick Wahlstrom, Chief Information Officer of the Northwest Regional ESD. “State and federal reporting requirements are ever increasing and the Edupoint solution offers better access to existing

data elements and improves the ability for districts to manage the collection of new elements. We look forward to working with our district partners to implement Synergy.”

“We are excited to have been selected by OSIS as the student information system provider for Oregon,” says Robert Weathers, Founder and CEO of Edupoint. “Our growth reflects the maturation of our solutions into a powerful student data management platform for education and affirms the benefits derived from engaging all the stakeholders in the education process. This is a true milestone for our organization, and we look forward to having current – and future – OSIS member districts and ESDs join the Edupoint family.”

Membership in the consortium is open to all Oregon school districts and ESDs. Consortium members will be informed about implementation planning as soon as it becomes available.

About Edupoint

For thirty years, the leadership of Edupoint Educational Systems, LLC, has set the standard for K-12 student information management systems. Their innovative solutions have been used by thousands of schools to manage millions of students. Today, the company empowers a new era of school districts with solutions built on Synergy Technology™, its extensible, scalable, rapid application development platform. Those solutions include the Synergy™ Student Information System, an enterprise-level student information system, and Synergy™ Special Education, a comprehensive special education management system.
